Overview

Workers run your code in the cloud.

Key characteristics

- **Fully Managed Execution**: RunPod takes care of the underlying infrastructure, so your code runs whenever it's triggered, without any server setup or maintenance.
- **Automatic Scaling**: The platform scales your functions up or down based on the workload, ensuring efficient resource usage.
- **Flexible Language Support**: RunPod SDK supports various programming languages, allowing you to write functions in the language you're most comfortable with.
- **Seamless Integration**: Once your code is uploaded, RunPod provides an Endpoint, making it easy to integrate your Handler Functions into any part of your application.

Get started

To start using RunPod Workers:

1. **Write Your Function**: Code your Handler Functions in a supported language.
2. **Deploy to RunPod**: Upload your Handler Functions to RunPod.
3. **Integrate and Execute**: Use the provided Endpoint to integrate with your application.
